Education

Jaypee Institute of Technology

B.Tech. in Electronics & Communication Engineering(CS specialization)

Noida, India

2023 – 2027

Technical Skills

Programming Languages: JavaScript, TypeScript, Python, C/C++

Data Structures & Algorithms: Arrays, Strings, Hashing, Stacks, Queues, Linked Lists, Trees, Basic Graphs

Tech Stack: React, Next.js, Express, Node.js, FastAPI, PostgreSQL, MongoDB, Tailwind CSS, WebSockets

Cloud & DevOps: Google Cloud Platform, Docker, Vercel

Dev Tools: Git, GitHub, Postman, Linux, VS Code

Projects

TripMind AI | *React, Vite, FastAPI, Python, LLaMA (Grog), REST APIs*

- Engineered an **LLM-powered travel planning system** that converts natural language prompts into **structured, multi-day itineraries**, consistently delivering responses within **sub-300 ms latency**.
- Implemented a **fault-tolerant LLM inference pipeline** using **Grog-hosted LLaMA models**, enforcing strict schema validation to ensure **100% JSON-compliant outputs** across all requests.
- Realized a **state-aware FastAPI backend** to preserve conversational context, enabling **iterative itinerary refinement** over **10+ sequential user interactions** without state loss.

SpendWise | *React, Express, Node.js, Tailwind CSS, Framer Motion, Chart.js*

- Devised a **full-stack expense management system** supporting **10+ spending categories** with real-time updates and persistent data storage.
- Implemented **secure authentication and authorization workflows** using **JWT, Node.js, and Express**, protecting user-specific financial data across all APIs.
- Developed interactive dashboards using **Chart.js and React**, decreasing dashboard **load times by 45%** through optimized data queries and asynchronous rendering, improving UX.

Achievements

Winner - BITBOX 5.0 Hackathon by Google Developers Group

April 2025

Sahyatri – An AI-Driven Advanced System for Intelligent Public Transit Occupancy Surveillance

- Orchestrated a **hybrid AI system** (Raspberry Pi 4 + **YOLOv5**) achieving **99% accuracy** for **real-time** passenger detection through model fine-tuning under diverse lighting conditions.
- Architected a **Python pipeline** with **FastAPI** server, reducing processing time by **50%** and designed **React.js dashboard** for live occupancy visualization.

Finalist - RideHack Hackathon

December 2025

TankMind – Smart Water Monitoring and Consumption Intelligence Platform

- Assembled an **IoT-enabled water monitoring system** integrating **sensor telemetry** with **machine learning models** to analyze usage patterns, detect anomalies, and identify inefficient consumption behaviors in real time.
- Designed a **scalable backend pipeline** for data ingestion, preprocessing, and inference, enabling **actionable insights** and **visual analytics dashboards** to support data-driven water management decisions.

Volunteer Experience

JIIT Youth Club (JYC)

Aug 2023 – Apr 2025

Core Committee Member

- Planned and organized **cultural, technical, and literary events** for **500+ students**, coordinating schedules, venues, and event requirements to ensure smooth execution.
- Managed **end-to-end event logistics** across multiple committees, overseeing registrations, resource allocation, and on-ground operations during event days.
